HYBRID WATER SOFTENER

by Purity Hub

At Purity Hub, we provide advanced water treatment solutions like the Fully Automatic Hybrid Carbon and Sand Filter Cum Water Softener. This hybrid system is designed to tackle common water quality issues like mud, hardness, and unwanted minerals, offering clean, soft water for everyday use. Here's a breakdown of the standout features and benefits of our hybrid water softener:

Complete Water Treatment: Mud and Hardness-Free Water

This hybrid system provides comprehensive water treatment by removing mud and reducing hardness levels. It ensures that your water is not only soft but also free from suspended particles and sediments. This improves the quality of water for household use and protects your plumbing and appliances from scale buildup.

Low Salt Alarm - Salt Level Awareness

Salt plays a vital role in regenerating the resin. Our Low Salt Alarm emphasizes the importance of maintaining optimal salt levels, ensuring that your system consistently delivers soft water.

Dual Function Regeneration Motor - Efficient Regeneration and Pumping Powerhouse

Our motor runs both the regeneration cycle and can be used as a pressure pump for added convenience.

100% Sun Rain & Dust Protection - Weather-Proof Durability

Enjoy long-lasting performance with complete protection from outdoor elements.

PATENTED LOW SALT ALARM

Smart & Proper Brine Tank - Efficient Brine Management

Our brine tank is designed for optimal salt efficiency and keeps your system running smoothly. Additionally, it balances salt and water ratios to prevent the use of excessive salts.

LP BFT for Regeneration Protection - Regeneration Assurance

Relax knowing our system safeguards against malfunctions during regeneration and avoids fake regeneration, preventing damage by avoiding regeneration in the absence of water.

Inbuilt Bypass Valve - Easy Maintenance

Easily isolate the softener for maintenance without interrupting your water supply.

Specially Designed Pressure Balancing Electronic Ball Valve

During regeneration, if excess pressure is generated from any source, it is released through the drain line. In the event of a pressure surge, the system ensures that no damage or malfunction, such as a burst or failure, will occur.

3-Year Warranty - Quality Assurance Guarantee

We stand behind our product quality with a reliable 3-year warranty.

Smart Info Panel - Convenient System Monitoring

This innovative technology, exclusive to Purity Hub, lets you check your system's status from a conveniently located panel downstairs (in your home, lobby, or anywhere) – no more climbing stairs!

LCD Display - Instant System Status

Get clear and easy-to-understand information about your system's operation directly on the unit itself with our built-in LCD.

Automatic and Manual Regeneration - Flexible Control Options

Choose between automatic regeneration for convenience or manual control for added flexibility.

Single Multiport Valve for Carbon, Sand Filter, and Water Softener

This hybrid system integrates a Single Multiport Valve to control the carbon filter, sand filter, and water softener simultaneously. This design streamlines the water filtration and softening process, ensuring efficient operation and space-saving convenience.
